TELE-HEALTH

Older people need reliable access to top-quality medical care to protect their health and well-being.

But for many older people, it is logistically challenging, emotionally stressful, and physically dangerous to travel to appointments. Physical and cognitive decline, the threat of falls, and the risk of virus exposure make on-site visits impossible or impractical.

You can help solve this problem by supporting ADF's investment in robust tele-health programs. With tele-health, people will receive the care they need, when they need it, from the comfort of their own homes.

- Cardiology
- Neurology
- Pulmonary
- Psychiatry
- Primary care
- Vital sign monitoring

PROVEN IMPACT

Patients comfortable with remote visits

Patients who found no difference between virtual and in-person care

Reduction in hospital re-admissions for heart failure from Veterans Health Administration tele-health program

HOW PEOPLE BENEFIT

- ✓ Regular, reliable access to wide-ranging, top-quality care
- ✓ No stress, transportation costs, or fall risk from traveling to on-site appointments
- ✓ No exposure to germs at healthcare facilities
- ✓ Lower risk of hospital re-admission because of more consistent follow-up care

STRONGER ★ SMARTER ★ SAFER

“ I love how I can meet with top-quality doctors from the comfort of my own home through a remote connection. Whether we face a pandemic or a snowstorm, I know I will receive the care I need.
